

ARJUN V M

heyarjunvm@gmail.com | +91 9946899080 | LinkedIn | GitHub | LeetCode | Portfolio

Education

Cochin University of Science and Technology

2020 – 2024

B.Tech Computer Science and Engineering | GPA: 8.64/10.00

Skills

- **Programming Languages:** C++, Python, Java
- **Web Development:** HTML, CSS, React.js, Redux, Go
- **Databases:** MongoDB, PostgreSQL, MySQL
- **Tools/Platforms:** Git/GitHub, Linux, Docker, Nginx, Azure, AWS, Ansible, Terraform, Azure DevOps
- **Others:** REST APIs, Data Structures & Algorithms, OOP, DBMS, OS, Computer Networks, Problem Solving, Agile

Work Experience

Software Engineer — DevOps & Cloud

July 2024– Present

EY

Kerala, Kochi

- Engineered CI/CD pipelines to automate build, test, and deployment workflows, eliminating manual release processes.
- Provisioned and configured infrastructure using Ansible, ensuring consistent and repeatable environment setups.
- Deployed containerized applications on Kubernetes, improving system scalability and fault tolerance.
- Integrated DevOps practices across development teams, accelerating release cycles and reducing production issues.
- Monitored and optimized deployment workflows, enhancing system reliability and minimizing downtime.
- Utilized version control (Git) and automation practices to streamline development and operational processes.

Web Development Intern

May 2023– June 2023

Futura Labs

Kochi, Kerala

- Built full-stack web applications using MongoDB, Express.js, React, and Node.js.
- Developed REST APIs and integrated frontend with backend services.
- Improved UI responsiveness and application performance .

Achievements

Site Reliability Engineering (SRE) Practitioner v1.2 Certification | DevOps Institute

2025

- Certified in implementing SRE practices such as reliability engineering, monitoring & alerting, incident response, SLIs/SLOs, and system automation.

Microsoft Certified: Azure Fundamentals (AZ-900) | Microsoft

2024

- Certified in Azure cloud concepts, services, security, compliance, and pricing models.

Projects

DeepShield — ML | Python, TensorFlow, OpenCV, CNN

- Built an end-to-end deep learning pipeline for detecting deepfake videos via frame-level analysis.
- Leveraged CNN models for spatial feature extraction to classify authentic vs AI-generated content.
- Engineered preprocessing workflows using OpenCV to improve model input quality and consistency.
- Enhanced detection performance through dataset preprocessing, augmentation, and model optimization.

DeployFlow — Cloud Project | GitHub Actions, Docker, Kubernetes, Azure

- Built a fully automated CI/CD pipeline from code commit to production deployment using GitHub Actions.
- Implemented Docker-based containerization and deployed applications on Kubernetes for scalable and consistent environments.
- Leveraged Azure cloud services to host infrastructure, improving deployment efficiency and reducing manual errors through automation.
